Idaho Eyecare Center is pleased to announce the availability of the Optomap Retinal imaging technology. With this instant scan, our doctors can obtain a panoramic 200° view of our patient's retina, which greatly enhances our ability to assess and monitor your eye health. Retinal problems including macular degeneration, glaucoma, retinal holes or detachments, and systemic diseases such as diabetes, stroke, and high blood pressure can lead to serious health problems including partial loss of vision and blindness. They often develop without warning and progress with no symptoms.

EARLY DETECTION IS CRUCIAL!

Optomap retinal imaging provides the following benefits:

- **Most patients can avoid having their pupils dilated with drops.**
- **Fast, easy, comfortable, and affordable for patients of all age levels.**
- **Enables the doctor to review and educate eye health with their patients.**
- **Builds a permanent digital record of eye health for your medical files here at the Idaho Eyecare Center and can be sent directly to your email.**

The Optomap retinal scan is offered at Idaho Eyecare Center, call today to ask questions about this new and amazing technology.
